

Triangular numbers are 1, 3, 6, 10, 15 etc. Square numbers are 1, 4, 9, 16, 25 etc. Semi-triangular numbers are numbers of the form $(2n+1)*T$, here $(0 \leq n < 8)$ and T is a triangular number. You will have to print all such numbers less than $16E34$ or 16000000000000000000000000000000, which are semi-triangular and also square.

Input

This program has no input.

Output

The output file contains several lines. Each line contains a number which is semi-triangular and also square. The numbers are printed in ascending order.

Note: Remember that there are no input for this problem. The sample output is only a partial solution.
