## Input

The input file contains less than 1001 lines of inputs. Each line contains a positive integer  $N$  ( $N \leq 10^{15}$ ) that indicates the minimum possible number of diagonals. Input is terminated by a line containing a zero. This line should not be processed.

## Output

For each line of input produce one line of output, which contains the output serial number, and also the minimum possible value for  $n$  (Number of sides).
